

E-CQURITY

MANAGE YOUR VULNERABILITY

■ PITMA Security Framework

PITMA is the acronym for the five different security phases **P**olicy, **I**mplementation, **T**raining, **M**aintenance, and **A**uditing. These five phases of PITMA Security Framework work coherently to provide you the best security protection a network can get. Security is a process with PITMA.

Policy

In this initial phase of PITMA, E-CQURITY's consultants will hold meeting with key people in your company to identify the company's assets and to understand the security requirements and concerns. Our consultants will then attempt to identify the threats to your network and evaluate their associated risks

Implementation

In this second phase of PITMA, E-CQURITY's consultants will help you to design, implement and configure security measures to comply what was agreed and written in your security policy

Training

Security training is specifically designed and conducted according to your security policy. Be it the management, the administrators, or the end-users, our security training programs are designed to help increase the security awareness and know-how throughout your company

Maintenance

The fourth phase of PITMA requires E-CQURITY's consultants to verify and assure that your network is operating in a predictable and secure manner

Auditing

The last phase of the PITMA Security Framework, Auditing, is an assessment of how well a security policy within your company being enforced and the effectiveness of the security measures
